

# The B2 Group Global Transaction Services Platform

At the core of The B2 Group's proven solutions for, payments, funds and FX is the Global Transaction Services (GTS) platform. GTS delivers a highly functional basis for integration and processing of numerous message types, transaction and report processing that is used by corporates and financial institutions across Europe, the Middle East and Africa.

The GTS platform may be run on the customer's site or accessed via a software-as-a-service (SaaS) solution hosted within B2's secure, high-availability centre in Luxembourg.

The platform supports a variety of functionality for users including:

- Transformation, validation and enrichment
- Access to multiple reference data sources
- Routing and exception management
- Full audit trail history within trusted, secure environment
- Transaction life cycle management
- Ease of configuration of business rules and administration requirements

*"The customer experience using B2 Group's GTS platform was excellent."*

*Philip Stewart, Assistant  
Treasurer, easyJet*

The key benefits identified by users of the GTS platform:

- Reduced integration time and complexity
- Industry standard messaging
- Automated real-time alerts improve efficient transaction problem solving
- Proven and robust architecture
- Secure and resilient data centre infrastructure affords peace-of-mind
- Backed by highly experienced and expert B2 consultants

The B2 Group's GTS platform is an ideal solution for organisations who are resource constrained whilst needing to meet the integration and connectivity challenges of their transaction business today and into the future.

*"The GTS platform brings a fresh approach to reduce the complexity and overcome the challenges of financial integration"*

B2 Group's teams have been praised by users for:

- ✓ Critical input into the project planning process – saving time and money
- ✓ Developing migration strategy and process – assists with future proofing
- ✓ Expert guidance on the identification and management of risks – operational risk reduction
- ✓ Planning and managing test environments, resources and processes – go-live with confidence
- ✓ Comprehensive documentation – keep the team fully informed throughout and after the project journey
