

B2 ChannelConnect Integrator

Secure and Flexible Channel Banking Integration

The Next-Generation Solution for Corporate Client Connectivity

B2 Group's ChannelConnect Integrator provides banks and their corporate clients with a one-stop-shop communication solution, for fully secure, easy to deploy electronic banking channel connectivity.

ChannelConnect Brings Rapid Benefits. With ChannelConnect you can:

- Communicate with an unlimited number of clients via a single 'light' but robust infrastructure
- Enjoy end-to-end security to and from the client system and bank system
- Connect up new clients quickly and easily by deploying ChannelConnect:
 - in hours rather than days and weeks
 - remotely, to avoid the need for on-site client installation visits by bank engineers
 - use the client's connectivity medium of choice (Internet, Leased Line, Proprietary Network ...).
- Maintain a **'total'** audit trail, protecting the bank from any retrospective claims by cross-referencing historical incoming client instructions against payments made
- Link, without the need for IT development or infrastructure change, to:
 - any ERP or other client-side system
 - any core-banking platform or other bank-side system

ChannelConnect's use of state-of-the-art smart technology makes heavy, traditional secure connectivity solutions expensive and obsolete.

ChannelConnect Integrator, built using B2 Group's many years of experience with deploying electronic channel banking integration solutions for the world's largest banks, delivers a breadth of functionality that covers all aspects of connectivity required by today's international transaction banks.

ChannelConnect's Unique Array of Features Simplifies Secure Bank/Client Connectivity Through:

- Automated use of encrypted public private key infrastructure ('PKI')
- Easy to configure, install and run:
 - remote deployment
 - runs on any server platform
 - light server footprint means minimal infrastructure requirement or resource usage
 - runs across any network
 - uses standard firewall ports, so no change in client connectivity security required
 - allows remote 'heartbeat' monitoring to check ongoing availability
 - bank access via browser based monitor screens
 - provides automated multi-media issue alerts (email, text, SMS...).
- Local storage of incoming and outgoing transaction messages client-side and bank-side means:
 - messages can be stored in a structured manner for an indefinite period
 - no message is ever lost
 - messages can be replayed at any point

B2 Channel Suite

The Low-Cost Electronic Channel Banking Efficiency Solution
